W. ATLEE BURPEE
founder of Burpee's seeds

He studied medicine when 16.
Started the Burpee seed business
at the age of 18.

Dear Friends and Fellow Gardeners

It is 80 years since my father founded the Burpee seed business. During all these years we at Burpee's have worked constantly to improve vegetables and flowers for your gardens.

The seed business is founded on confidence, for no one can tell the value of seeds merely by looking at them. You can fully appreciate the quality of seeds (or regret their lack of quality) only by the way they grow.

The seed business requires constant care for unless we select and select the best vegetables and flowers for seeds they have a tendency to revert to their more primitive form. The poorest tomatoes have the most seeds. By selection, hybridizing, and the use of all modern methods, we maintain the high quality of Burpee seeds.

It should always be remembered that it pays in both pleasure and profit to plant only the best seeds. Seeds cost less for what they produce than anything else that goes into your garden, so plant Burpee's seeds, "the best that grow."

Most of the old favorite varieties, improved where possible, and many new varieties created on our own seed farms, are offered in this catalog.

I hope you will make your selection from this Burpee catalog soon. If you send us your orders early it will help us to give you the best possible service.

In this 80th year of our business, I want to thank each one of you for your confidence in us and for the orders you send us.

It is safe and easy to order seeds by mail.

Mail your orders to us at any time, but early if possible.

We are waiting to supply you with Burpee seeds and bulbs and we wish you very successful gardens this year and always.

Faithfully yours,

David Burpee

Girls harvesting pansy seed on Floradale Farms. Because the plants keep on blooming through a long season, it is necessary for the girls to go over the fields most frequently, often every day, and hand pick the seed pods, otherwise they would shatter and much valuable seed would be lost.

A field of Burpee's snapdragons growing for seed on Burpee's Floradale Farms.

Day after day, girls painstakingly hand pollinate petunia flowers to create the new hybrids. It is necessary for us to hand pollinate each year and for best results in your garden you should get new seed each year. It is amazing to see the hybrid vigor in the plants, the profusion of flowers and the way they are carried well above the foliage of the bushy plants.

Seeds of hardy annuals are sown directly outdoors, after which it is necessary to thin out and transplant. The men here are doing such work in a field of asters growing for seed at Floradale.

BURPEE'S NEW F₁ HYBRID PETUNIAS

Each a hand pollinated variety and all created on Floradale Seed Farms

These four wonderful, new petunias with rich, brilliant, distinct new colors not found heretofore in petunias, are true first generation (F₁) hybrids. They are also available in mixture. Hybrid petunias are really outstanding, for each seed is produced by carefully controlled crossing by hand of two distinct parent lines. This is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with larger flowers and considerably more of them per plant. 20 to 30 in. tall.

4387 Petunia F₁
Scarlet Gleam Pkt. 50¢

4366 Blue Bonnet Large 2½ in. clear blue flowers cover the 30 in. plants; a better blue than any other petunia we have ever seen. Vigorous grower.

4376 King Salmon Showy 3 in. flowers of the richest deep salmon on compact spreading plants 20 in. tall. An excellent new color in an F₁ petunia.

4387 Scarlet Gleam Brilliant scarlet flowers 3 to 3½ in. across with a slight undertone of orange are borne in profusion on upright plants, 20 in. tall.

4386 Yellow Gleam The nearest to yellow of all petunias. 2½ in., slightly frilled flowers of clear lemon-yellow, darker toward the throat. The color becomes lighter in hot weather. 30 in. plants covered with blooms.

4385 Mixed Colors Each of the above varieties, plus other new ones of which the seed supply is too short to offer separately, in a dazzling mixture for beds and borders with an abundance of the most gorgeous flowers for cutting.

ALDOUBLE PETUNIAS

F₁ Hybrids

Alldouble Petunias are truly gorgeous. The seeds are obtained at such high cost by hand-pollination that they are worth many times their weight in gold. Because seeds are so extremely valuable, extra care should be used in sowing them. Start seeds indoors in shallow boxes, pots or seed-pans eight weeks before your usual outdoor planting time; set young plants in the garden when weather and soil have become warm. All are excellent for beds, borders, window boxes, pot-plants and cutting. Wherever used, the extraordinary beauty of the well-formed double blooms, together with their marvelous colors, are sure to command instant admiration.

NASTURTIIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil; if overly rich it will cause plants to produce more leaves than flowers. They are most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and semi-tall or dwarf growing. Their varied colors, different shapes and refreshing fragrance make them most desirable for cutting. The ever popular Golden Gleam was the first double to be grown from seed. Since then we have created double nasturtiums in all the best colors.

Semi-Tall Giant Double Nasturtiums

Flowers are extra large, exquisitely sweet-scented, double and semi-double with eight or more petals; plants are semi-tall and splendid for beds, broad borders or as ground covers. May be trained upon strings or wire. Valuable for cutting, as flowers keep for a long time.

3241 Golden Gleam *All-America Gold Medal Winner.* Very rich golden yellow, sweet-scented long-stemmed flowers. Profuse blooming.

The final judging of the "White Marigold" trials at Floradale Farms on August 19, 1955; left to right are David Burpee, Dr. Leonard H. Pollard, Head of the Department of Horticulture, Utah State Agricultural College, Logan, Utah, and Dr. V. T. Stoutemeyer, Chairman of the Department of Floriculture and Ornamental Horticulture, University of California.

In the Burpee catalog for 1954, Burpee offered \$10,000 for the first seeds that would grow a white marigold (seeds to be sent us before January 1, 1955). Such seeds as were sent us were grown on our Floradale Farms, summer of 1955. The first judging was on July 20, 1955 (see picture on page 1); the final judging on August 19, 1955 (see picture above).

After carefully examining all of the trial rows grown from seed sent in by 204 gardeners from 38 states and Hawaii, the judges unanimously agreed that no white marigold appeared. Therefore, no \$10,000 award was made this year and Burpee repeats the offer:

\$10,000 for a White Marigold

Burpee will pay you \$10,000 if you are the first person who sends us seeds that grow the first White Marigold as big as Man-in-the-Moon Marigold and as white as Snowstorm Petunia. Complete details are on page 1.

Burpee's
Red and Gold
Hybrid Marigolds
Pkt. 50¢

Award of Merit, Royal Horticultural Society of Great Britain. Flowers of Burpee's Red and Gold Hybrids are exceedingly double, 2½ to 3 in. across, some are solid red while others are delightful combinations of red and gold. Color varies with the season—at times it becomes almost pure golden yellow and at other times a bright, rich mahogany-scarlet. The bushy, upright plants grow up to 2½ ft. tall, 2 ft. wide. They flower in 8 weeks from seed and continue to bear profusely and continuously until

the plants are killed by frost. Especially suited for borders and beds; prized for cut flowers and exhibition. Good keepers; last a long time when cut.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color may appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems. If any plants with green stems appear in your planting, we suggest that you transplant them to a separate location. They usually grow taller than the hybrids, more bushy and with larger flowers.

EVERLASTINGS AND STRAWFLOWERS

With the exception of Job's Tears, Briza maxima and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. Briza maxima holds its panicles when dried and may be used alone or with dried flowers. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and Briza maxima grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Celosia (Cockscomb), page 18, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

EARLY FLOWERING SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—usually 3 to 4 weeks earlier than the Burpee Giant varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. All types of sweet peas prefer an open, sunny location, and deep, rich soil which must be well drained. Those listed below are the very choicest, large flowered varieties in a wide array of the best colors.

- 3469 **Burpee's Giant Pink** Lovely shade of rose-pink.
- 3439 **Burpee's Lavender** Exquisite light wisteria-lavender.
- 4288 **Burpee's White Giant** White-seeded pure white.
- 3421 **Crimson Banner** Excellent, large, ruffled and duplexed rosy crimson flowers borne in 3's and 4's on long, strong stems.
- 3378 **Helen Hayes** Appealing shade of soft salmon-pink.
- 3422 **Joyce Holden** Burpee's new glistening orange-scarlet, delicately waved, fluffy sweet pea which is as lovely as the motion picture actress for whom it was named. Showy and attractive.

3329 Kate Smith Unusually long-stemmed, large, well-formed bright scarlet flowers with slight suffusion of rose.

3339 Merilee Beautifully clear cherry-cerise flowers of large size, well placed on good, strong stems. Vigorous grower.

3409 Mrs. Douglas MacArthur Deep fawn-pink on a creamy white ground. Extra large, attractively waved flowers.

3488 Pearl Buck Rich rose standard with an orange tinge; wings are deep rose. The general effect is a most pleasing rose.

3408 WAVES Mid-blue, exceedingly fragrant, large blooms.

MULTIFLORA SWEET PEAS

4281 Mixed Colors As the name indicates, the outstanding characteristic of this new class of sweet peas, which distinguishes them from other varieties, is that more flowers are borne to a stem when plants are well grown. Flowers are of medium size, stems are long and strong. The number of blooms to a stem seems to vary with the color—five, six and more under favorable conditions. Many of the flowers are strikingly waved. In color they range from pure white through shades of pink and rose, orange-cerise, lavender, etc. Plants are vigorous, free blooming, rather early; flowers are wonderful for cutting.

BURPEE'S TETRA SNAPDRAGONS

Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting; having good substance adds to their keeping value. Wherever seen, they are sure to demand admiration.

3495 Tetra Candlelight Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Extremely rich and beautiful.

4267 Tetra Crimson Very large, deep but bright, velvety crimson flowers closely set on long, broad, tapering spikes above dark green, thick foliage.

4269 Tetra Pink Shades Exquisite shades from pale shell-pink to deep rose. Tapering spikes are filled with large, nicely formed, well placed flowers.

3499 Tetra Shades of Rose Especially selected for those who prefer the clearer, deeper shades of rose for their garden. A most appealing blend.

3493 Tetra Sunset Hybrids Pleasing color blend of bronze and soft shades of pink. Much admired. Pretty in beds and borders or when cut.

4258 Tetra White Creamy white changing to pure white with age; primrose throat which adds to the beauty of the large, attractively formed flowers.

SNAPDRAGONS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time.

New Base-Branching Snapdragons

The spikes, coming from near the base, form an upright plant, 2 ft. tall, with about one-half their height covered with large, attractive flowers. Quite showy in the garden and the long-stemmed spikes are highly prized for cutting. Early blooming, vigorous growers.

4373 Floradale® Rose New for 1956. Long, tapering spikes covered with bright rose-pink flowers with a pleasing soft yellow blotch on the palate. Individual flowers are numerous, closely placed and make up into a towering spike of great beauty.

Burpee's Double Snapdragons

Flowers are of an amazing formation, quite large, 1 1/4 in. across and 1 1/2 in. deep when well grown. The upper lip broadens and recurves gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement as well as surprise, to a handsome flower. Lovely for garden and cutting.

3475 Floradale® Double Soft Dresden yellow. On the unopened buds there is a pale rosy blush which disappears as soon as they open. Flowers are large, with many in bloom at the one time. Being closely placed on strong 2 1/2 ft. spikes, they produce a mass of color.

BURPEEANA EXTRA EARLY ASTERS

Burpeeana Asters are of uniformly upright, compact habit of growth and come into bloom extremely early. Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals. They are most highly prized both in the garden and for cutting.

Plants are of erect, base branching growth, average 20 in. in height, with many stems per plant, each stem topped with a flower somewhat resembling the American Beauty in shape. Terminal flowers come into bloom at about the same time, thus making a grand showing. In our plantings, Burpeeana Asters reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems. Created by Burpee on Floradale Seed Farms.

This photograph shows the earliness and base-branching habit of Burpeeana Extra Early Asters compared with Queen of the Market Early Asters shown on the left. Seeds were sown at the same time.

HOW TO GROW ASTERS

Asters are easy to grow. They prefer rich, well-drained soil and a warm, sunny location. For earliest blooms, sow seed indoors in boxes or seed-pans four to six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm. A continuous display of flowers from early summer until frost can be had by planting Extra Early Burpeeana and other early, midseason and later blooming varieties. Asters have long lasting qualities, so are wonderful for cutting.

BURPEE'S GIANT HYBRID ZINNIAS

The loveliest flowers ever created. They include both first and second generation hybrids, grow 5 in. and more across, with a pleasing variation in petal formation, the majority being of the informal fluffy or ruffled type, some attractively curled, others gracefully quilled. The loosely arranged petals give the flowers an airy appearance, free of the stiffness often associated with other zinnias.

Their glistening beauty, stem length and keeping quality make them one of the most popular of all cut flowers. Plants are strong, free blooming, 2½ to 3 ft. tall and ideal for garden decoration.

Burpee Giant Hybrid Zinnias, Floradale Scarlet and Riverside Beauty were introduced in 1950 and were such a "hit" that other varieties were created and introduced in subsequent years. For 1956, we add Burpee Gold and Kismet—two sensational new varieties that will further enhance the color range of these outstanding Zinnias.

Luther Burbank Zinnias

4313 *Luther Burbank Zinnia* Pkt. 25¢

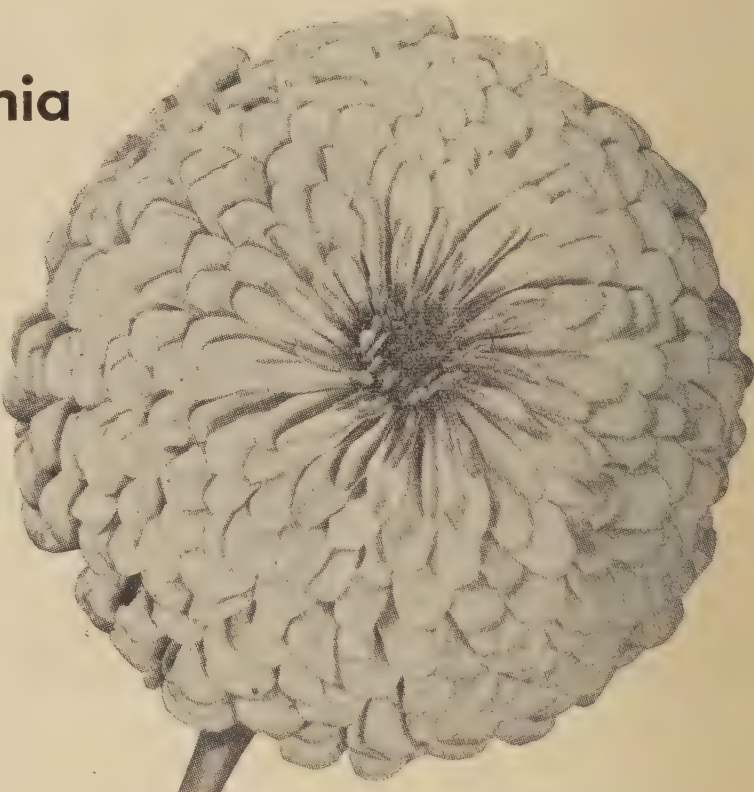

4313 Luther Burbank Zinnias are a rare blend of lovely, delicate pastel or art shades comprised of many self colors ranging from cream and primrose through delicate buff-yellow, canary yellow, ivory, soft salmon, warm rose, chamois, apricot, peach, blush pink, salmon-pink to clear, bright rose. There are also unusual two- and three-color combinations of soft and light shades in some of the individual blooms. When an occasional pale lavender or light orange appears, it is always a tone that blends well with the others.

Flowers are deep, 5 to 5½ in. across, larger than dahlia flowered and are composed of numerous big, flat petals curled under at the ends. Plants are strong growing, 3 to 4 ft. tall, well-branched so that an abundance of long-stemmed giant flowers is assured for cutting.

Plants are vigorous, well-branched, grow about 3 ft. tall and produce many long, strong flower stems each crowned with a beautiful flower.

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms. Sow seeds early so that you will have stronger plants to go through the winter and give more bloom the next spring and summer.

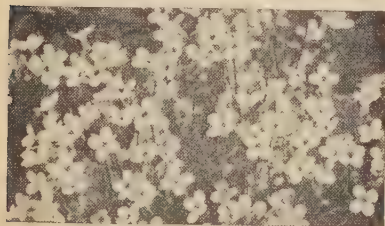

Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

◎ Follow the Bull's Eye ◎

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, ◎, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

Yellow Pod Beans have an appetizing, distinctive flavor and tenderness that make them a favorite in market or home gardens. As with green-pods, you have your choice of varieties with either round or flat pods. Round-podded varieties are the most desirable for home canning and freezing. Planting information given for Bush Snap Beans on next page applies to yellow and green pods alike. 15 to 20 in. tall.

Beans are continued on the next five pages

Stringless Green-Pod BUSH BEANS

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins then, are better for you, and, they taste better.

Burpee's Tender Pod Bush Bean

6173 Burpee's Tender Pod

48 days. Introduced by Burpee in 1941.

All-America Bronze Medal Winner. The most delicate flavored, the most tender and the most succulent bean at all stages of growth. Pods are brittle, fleshy, meaty, stringless, fiberless, $4\frac{1}{2}$ to $5\frac{1}{2}$ in. long, thick, round, smooth, deep green, and characterized by unusually long, curving tip ends. Of great value for home and market garden, canning and freezing.

Matures early and is productive over a long period. Seems to be less affected by adverse weather conditions than most varieties. Seeds are pearly white, with a small red spot on either side of the eye; the red spots do not appear until beans are about matured. If allowed to ripen, the dried, oval-shaped shell beans are of excellent quality for baking or boiling.

How to Grow Bush Snap Beans

Plant seed when danger of frost is past and the soil is warm, in rows 18 to 30 in. apart for hand cultivation or $2\frac{1}{4}$ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall and will bear more pods if you pick them when young at which time they are truly delicious. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

BUSH SHELL BEANS — Extensively grown for use as dry beans

Red Kidney and White Marrowfat are grown mostly as dried beans for winter use; Dwarf and French Horticultural for green shelled beans, although pods may be used, when young, as snap beans. Culture is similar to that recommended for bush beans on page 72, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many pole beans, listed on page 76, are also desirable as shell beans.

5082 Red Kidney 95 days. Pods are 6 in. long, flat, light green, stringy and inedible; beans are large, kidney-shaped, pinkish red to mahogany, and are in great demand either baked, boiled, in soups or certain Spanish and Mexican dishes. Also used for commercial canning. They have a rich flavor, different from white shell beans and are preferred by many. Prolific.

Bush LIMA BEANS

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush or the newer Triumph). Some prefer one type for eating fresh, another as dry beans or freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size. For dried beans, pods should be left on the plants until fully matured.

Plants are bushy, upright, 20 in. or more in height, with a spread of 2 ft. or more; very vigorous, with many pod-bearing lateral branches. How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Many persons prefer the flavor of pole lima beans to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the medium-thick (Burpee's Big 6), while others prefer the flat-seeded (Burpee's Giant Podded); some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

6181 Burpee's Big 6 Ⓞ—Introduced by Burpee in 1950

88 days. Longest podded pole lima, 6 to 7 in. long, 1½ in. wide with usually 6 large, medium-thick, tender beans of the choicest quality and flavor. Beans have a good green color which is retained to a great extent when cooked. Plants are tall growing, excellent climbers, vigorous, dependable and heavy croppers. We recommend it most highly for home garden, market, canning and freezing. In some sections, customers have reported only 5 beans to a pod. On our farms, Burpee's Big 6 averages one more bean per pod than Giant Podded or King of the Garden and grows about 1 in. longer than either of these varieties.

Pkt. 25¢; ½ lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.25

5124 Burpee's Best Ⓞ—Introduced by Burpee in 1935

92 days. A pole bean with all the good characteristics of Fordhook Bush—thick seed, rich tenderness, larger pods with three or four times as many on each plant. Pods are straight, 4 to 4¾ in. long, 1¼ in. broad, and ½ to ¾ in. through, well filled with 4 or 5 big, plump, "potato" type beans that are exceptionally tender and have the distinctive nutty flavor of the bush Fordhook. Excellent for freezing, shipping, home and market. Vines are strong climbers; 10 to 12 ft. high.

5111 Carolina or Sieva—"Butter Bean"

78 days. Pods grow 3 to 3½ in. long, and contain 3 or 4 small, flat, smooth beans of splendid quality. Quick to bear; especially valuable in sections with short summers, and in localities with hot summers where pods often fail to set. Shelled beans are medium green; white when dried. How to Grow Pole Lima Beans

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft. Pole Beans may be planted the same way.

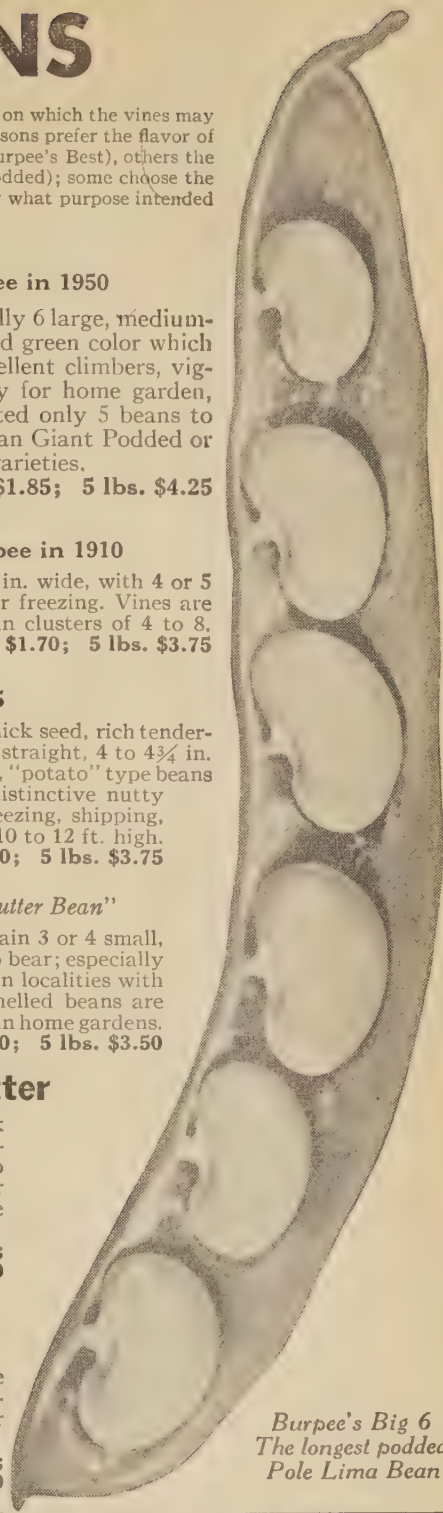

FAVA BEAN (Bush)

5083 Long Pod 85 days. Much hardier than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. Pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. A pkt. will plant 15 ft. of row; 1 lb. 75 ft.

POLE OR CLIMBING BEANS

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. Support must be given the vines, which grow 5 to 8 ft. and more high. Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type.

How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is passed and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil. When plants are well started; thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles, except Scarlet Runner, a pkt. of which is enough for 8 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence.

Popular in home gardens. Suitable for freezing.

In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. A pkt. will produce about 250 plants; an oz. 3000.

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

5236 Michihli 70 days. A week earlier than Pe-Tsai, sure header and remains in good condition for a long time. Heads grow 18 in. tall, 3½ to 4 in. thick, dark green leaves, blanching pure white inside. Tender, crisp and sweet with an agreeably spicy flavor. Extensively grown for market, the large heads sell readily; most popular for the home garden where the longest head is wanted.

5207 Pe-Tsai 78 days. Large Cos Lettuce-like heads 12 to 14 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanched, tender and juicy.

CORN SALAD—*Perhaps better known as Lamb's Lettuce*

5219 Large Leaved Round 60 days. Quick grower; fine for early spring, late fall or winter use. It is quite hardy, producing an abundance of gray-green rounded leaves which are sometimes served like lettuce but are better if mixed with more piquant "greens." May also be cooked like spinach or used for garnishing like parsley. Sow seeds outdoors in the spring when soil and weather have become thoroughly warm for early use and again in midsummer for use during the fall.

Pkt. 20¢; ½ oz. 45¢; oz. 80¢

CRESS—*Easy, quick growing "green"; best flavor if used when young*

5216 Fine Curled (Pepper Grass) 40 days. The finely cut, deep green leaves have a pleasing, pungent taste and are excellent for flavoring salads, garnishing, or as a "green" alone or with lettuce. Sow seeds outdoors in the spring when soil and weather have become warm.

Burpee's TABLE BEETS

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together. Burpee's Red Ball, Burpee's Redhart, Detroit Dark Red and Crosby's Egyptian are universally popular.

Burpee's
Red Ball

6193 Burpee's Red Ball Ⓞ—Excellent

60 days. Introduced by Burpee in 1904. Remarkable for its uniform shape, deep colored flesh, and sweet flavor. The roots are globe-shaped, growing to 3 in. in diameter, with smooth, deep red skin and medium-small tap-root. Flesh is tasty, extremely dark red, free from woody fiber, and under good growing conditions, is practically free from lighter colored zones. Its intense dark red color especially fits it for table use. For a market where dark red colored flesh is a primary requirement, for canning, freezing or any commercial use, Red Ball is highly recommended. Medium tall, red and green, erect growing foliage tops. One of the best red beets for the home gardener.

Pkt. 25¢; oz. 55¢; ¼ lb. \$1.50; ½ lb. \$2.50; lb. \$4.00

6191 Crosby's Egyptian—Popular early beet

56 days. Widely grown for early table or market use; suitable for freezing. Roots are top to semi-globe shaped and about 3 in. in diameter with medium size tops and slender tap-roots. The skin is smooth, medium dark red and the flesh purplish red, with lighter colored zones; tender, sweet and entirely free from fiber.

Pkt. 15¢; oz. 45¢; ¼ lb. 95¢; ½ lb. \$1.65; lb. \$2.80

6185 Burpee's Extra Early Ⓞ—Earliest round beet

58 days. Introduced by Burpee in 1880. Wonderful early beet with perfectly smooth globe-shaped roots growing to 3 in. but, as with all beets, can be used when small. Flesh is dark red and shows hardly any zones. Popular with home and market gardeners. Prized for canning or pickling whole. Sweet and tasty.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.25; ½ lb. \$2.20; lb. \$3.45

6196 Burpee White—Sweetest flavored beet

60 days. Introduced by Burpee in 1952. Roots are white, top-shaped to nearly round, with a fairly heavy tap-root. Occasionally the roots have a slight pink tint on the shoulders. This coloring is only on the skin, and does not run into the interior flesh, which is pure white, tender, firm, crisp, and entirely without fibers. The quality is excellent, being similar to but sweeter than any red table beet we have ever tasted. Tops are large and vigorous, of a shiny, medium green color; excellent for "greens." Popular with home gardeners.

Pkt. 25¢; oz. 60¢; ¼ lb. \$1.75

5132 Burpee's Blood Turnip Beet

59 days. Introduced by Burpee in 1883. Our improved strain produces roots up to 3 to 4 in. across, round but sometimes deeper than their diameter. Flesh is dark red, occasionally zoned, fine grained and sweet. For home and market.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.25; ½ lb. \$2.20; lb. \$3.95

6233 Burpee Green Leaf—Free of reddish tinge

56 days. Introduced by Burpee in 1954. Splendid table beet developed at our California experimental farms to fill the need for a truly green leaf beet of early maturity, attractive shape and size. The tops of this new beet are entirely green with no reddish tinge or red petioles as in most table beets. When cooked they retain the appetizing green color. The roots vary from flattened globular to top shaped; dark red skin and purplish red flesh with lighter zones, sweet and tender.

Pkt. 25¢; oz. 60¢; ¼ lb. \$1.60; ½ lb. \$2.75; lb. \$4.50

6203 Detroit Dark Red, Short Top Ⓞ

60 days. Widely used round beet for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red; always sweet and tender. Smaller tops allow beets to stand closer together in the row.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.25; ½ lb. \$2.20; lb. \$3.45

6192 Detroit Dark Red, Medium Top

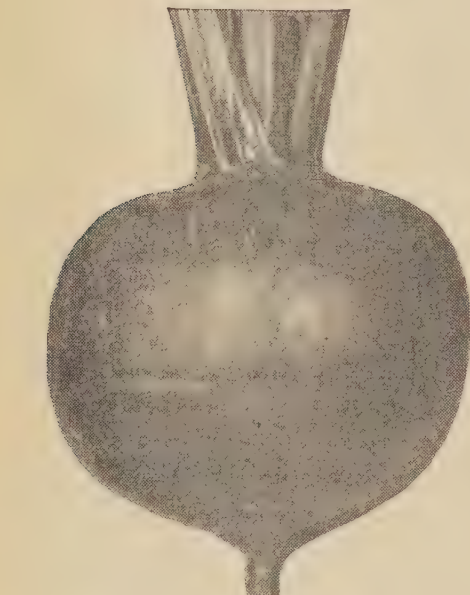

59 days. Beets are perfectly round with deep red skin. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning.

Pkt. 15¢; oz. 45¢; ¼ lb. 95¢; ½ lb. \$1.65; lb. \$2.80

5122 Early Wonder—Valuable for home and market

55 days. Semi-globe-shaped, about 3 in. across, with medium size tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Gardeners like this very early beet; its smooth skin and uniform shape commend it to everyone. Popular for canning whole or sliced as well as for pickling.

Pkt. 15¢; oz. 45¢; ¼ lb. \$1.00; ½ lb. \$1.80; lb. \$3.15

Roots are semi-globe to heart shaped with smooth, red skin and dark red flesh which cooks tender with no fiber and is of a sweet flavor. 5125 Extra Early Flat Egyptian — Earliest

53 days. Roots are distinctly flattened and have small tops; flesh is sweet and tender, dark purplish red zoned with a trifle lighter color. Skin is medium red. The earliest of all beets; fine for home garden and early market. Fully grown beets measure 3 in. across; retain their red color when cooked. Easily harvested as roots grow well above ground. Used to some extent for forcing or transplanting for the early market when prices are high.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.25; ½ lb. \$2.20; lb. \$3.45

5123 Lutz Green Leaf ⊙ — Good winter keeper

80 days. Roots are half-long, top-shaped, dark purplish red with dark red flesh and slightly lighter zones. Tops are glossy green with pink mid-rib. As the half-long shaped beets grow slowly, they are valuable as a late beet and whether used when small or allowed to grow large, they are tender, very sweet and will remain so all summer as well as when stored for use during the winter. Popular for produce markets in some sections selling direct to consumer. It is truly a long season beet of quality.

Pkt. 15¢; oz. 45¢; ¼ lb. \$1.10; ½ lb. \$1.85; lb. \$3.25

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Space rows 1½ to 2 ft. apart and cover seed with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 2 to 3 in. apart in the row. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

SWISS CHARD SUMMER GREENS

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthful and nutritious, easily grown vegetable. Chard stands hot weather and is an abundant, continuous yielder.

6202 Burpee's Rhubarb Chard ⊙ — Distinct

60 days. Introduced by Burpee in 1941. A Swiss Chard that looks like rhubarb. The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere.

6195 Burpee's Fordhook® Giant ⊙ — Tall

60 days. Introduced by Burpee in 1924. Leaves are rich dark green, much crumpled or savoyed, and when grown well, will measure 10 in. in width and 2½ ft. in length; texture is thick and fleshy. The pearly white stalks, 2½ in. across, make an excellent dish prepared like asparagus as do the broad mid-ribs of the leaves.

6002 Burpee's Copenhagen Market ☉

72 days. **First introduced in America by Burpee in 1911.** An outstanding strain notable for its uniformity which, when combined with earliness, makes it most valuable to both home and market gardeners: Well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. The flavor of the crisp, tender, white interiors is remarkably fine so that it is also desirable for early kraut making. Charleston—Discontinued; recommend Early Jersey Wakefield.

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing. Drop a whole walnut into the water when cooking cabbage to decrease its typical odor.

6001 Golden Acre ☉—Round

Plants are small and compact, which permits close planting. A valuable extra-early cabbage for the home garden and a profitable one for truckers; extensively grown for shipping.

How to Grow Cabbage

For earliest crop, sow early and midseason cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become warm. A pkt. of cabbage seed will produce about 125 plants; oz. about 3000 plants. Days to maturity are from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows 2½ ft. apart; the large midseason and late varieties 2 ft. apart in rows 2½ to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family, had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

How to Grow Cantaloupes

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills."

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma.

5245 Hale's Best No. 936—Largest

85 days. (*Salmon-orange Flesh*) One of the most widely grown strains of Hale's Best. Developed from Improved 36, it possesses all the outstanding features of that special strain and, in addition, it grows somewhat larger. 7½ in. long, 6 in. across, oval to nearly round, heavily netted, uniform in size and shape. Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook and Giant Pascal. Both are famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

6022 Burpee's Fordhook® ☉

130 days. Introduced by Burpee in 1915 and named for Burpee's Fordhook Farms. The best fall and winter celery in existence. Plants are stocky, compact, 15 to 18 in. tall and while comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. An ideal variety for winter storage. We offer our improved strain. Pkt. 35¢;

Stalks and heart are tender, solid, free from strings and of the most delicious nutty, crisp and juicy flavor. A very desirable early celery grown extensively by home gardeners as well as market growers.

Burpee's Fordhook, the finest flavored as well as the best fall and winter green celery

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. If too crowded, plants will grow slowly so that small, misshapen roots and unsatisfactory yields may be produced. Do the thinning while plants are still small so as to disturb the roots of remaining seedlings as little as possible and be sure to firm the soil back around the plants left in the row. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

5013 Burpee's Oxheart

75 days. **First introduced in America by Burpee in 1884.** Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 4 to 4 1/2 in. long and 3 to 3 1/2 in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling. Good winter keeper. Hybrid South American Mushroom

Burpee's White Evergreen

To enjoy Sweet Corn at its best, it should be eaten as soon as possible after ears are pulled. Take husks off promptly and if necessary to keep corn for a short time, put the husked ears in transparent bags and keep at a 40 to 50° temperature until ready to use. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed of any hybrid corn each year.

How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 8 to 12 in. apart. Some prefer to sow 4 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 or 3 plants to remain in a group. For a continuous supply, sow varieties which will mature in succession; also make additional sowings when the preceding planting is up and well started.

Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

Burpee Hybrid Cucumber®

TRUE FIRST GENERATION (F₁) HYBRID

ORIGINATED ON BURPEE'S FORDHOOK® FARMS and introduced by us in 1945

6023 Burpee Hybrid 60 days. High resistance to mosaic and downy mildew are the outstanding attributes of this true, first generation (F₁) hybrid, white spine, slicing type cucumber. In addition, the yielding ability of the hybrid has been greatly increased over the open pollinated varieties. Vines are extremely vigorous, long lived and bear an abundance of well formed, straight, dark green fruits of handsome appearance, 8 in. and more long, 2½ in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality.

Burpee Hybrid is a high-class cucumber for the home garden, market grower, long distance shipper and greenhouse culture. Burpee Hybrid Cucumber is one variety that should be planted early—as soon as possible after the soil is thoroughly warm. And, don't think you have to give up growing cucumbers if your garden is very small. Cucumbers are natural climbers and may be grown on a fence or trellis. You will be surprised at the number of fruits the Burpee Hybrid will produce.

"—I grew a row of your Burpee Hybrid Cucumbers and provided support so they could climb. Vines grew 7 ft. 11 in. high, stayed green almost the whole summer and bore a heavy crop of cucumbers. I had all I could use; in addition, I supplied my daughter and family, my brother's daughter and two neighbors with cucumbers. Your hybrid tomatoes and other vegetables were fine. My advice is to grow your own vegetables and get fresh air, sunshine and a barrel of fun in doing it. . . ."

H. F. Leitner, Portsmouth, Virginia

"—I have grown your hybrid cucumbers for the past two years and took first prize at the show both years. It certainly has everything a good cuke should have; color, taste, size, small seeds and prolific production over a long period, and stands the hot dry spells we get here in August. . . ."

Leo G. Karnath, Ontario, Canada

NOTE: Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plants with a small part of the stem attached.

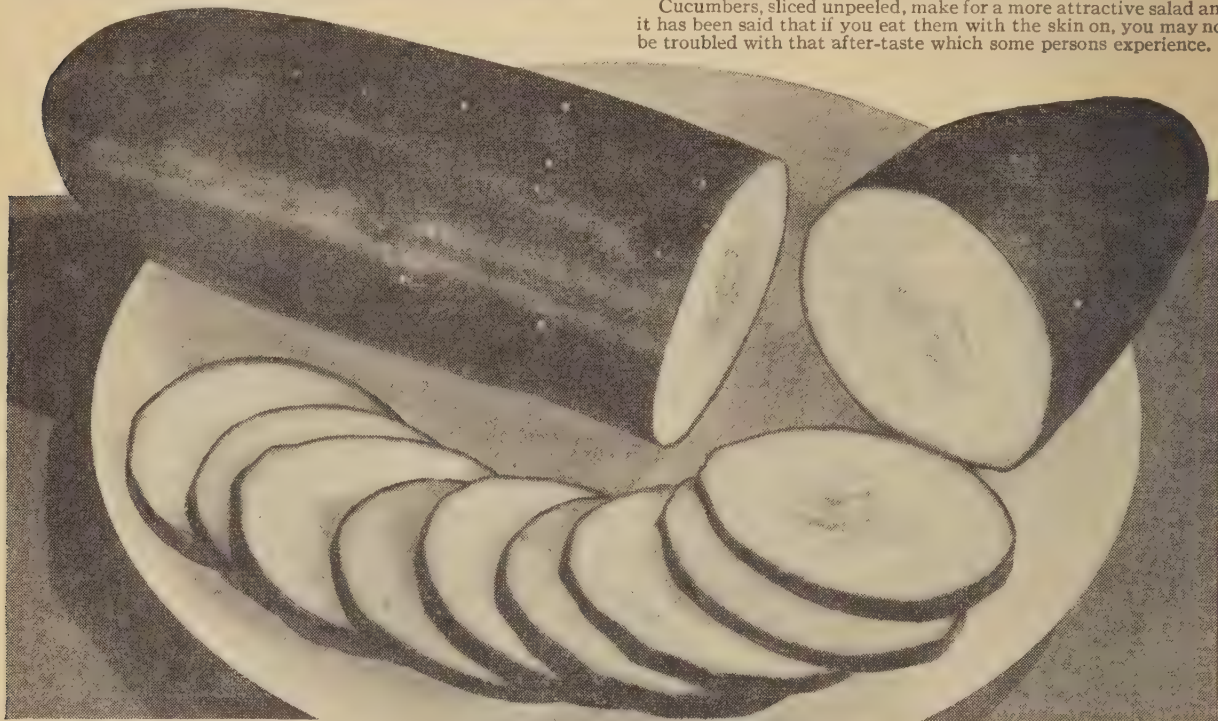

Burpee Hybrid Cucumber (foreground) has such high resistance to mosaic and downy mildew that it outyields the standard varieties (in background) because the vines continue to produce for a long time after others have ceased.

Burpee's CUCUMBERS

May be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers, plant Burpee Hybrid listed on the preceding page. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notch.

Cucumbers, sliced unpeeled, make for a more attractive salad and it has been said that if you eat them with the skin on, you may not be troubled with that after-taste which some persons experience.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers, offered on opposite page, are black-spined; all others, with the exception of Improved Long Green, are white-spined.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with $\frac{1}{2}$ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row.

*Fordhook Pickling*

Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when

used with cucumbers, onions, peppers, etc., in mustard chow-chow. Cauliflower is best grown as a fall crop in the greater part of the U. S., although in regions where summers are cool, sowings may be made indoors 30 to 40 days before time to set plants in garden.

Days to maturity given in descriptions are from the time the plants are set out in the garden. These are average and will vary somewhat in different seasons and sections.

*Burpeeana
Cauliflower*

Beautiful, well-rounded, compact, pure white heads with smooth curds, of superb quality well protected by many long jacket leaves. Vigorous growing, sturdy, upright plants.

5205 Burpee's Dry Weather

95 days. Introduced by Burpee in 1899. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting other cauliflowers to head, try Dry Weather.

How to Grow Cauliflower

For a main or fall crop, sow the seed thinly in a specially prepared seed bed or coldframe about 4 months before your first expected frost. Thin out from time to time to allow ample room for development. It is important that cauliflower seedlings are not allowed to become crowded in the plant bed. When plants are ready to be set in the garden, space them 1 1/2 to 2 ft. apart, in rows 2 1/2 to 3 ft. apart. They must always be kept in a healthy growing condition until heads are formed. Any stunting of growth, due to lack of moisture or low fertility, may prove harmful to the crop. A packet will produce about 150 plants; 1 oz. 4000.

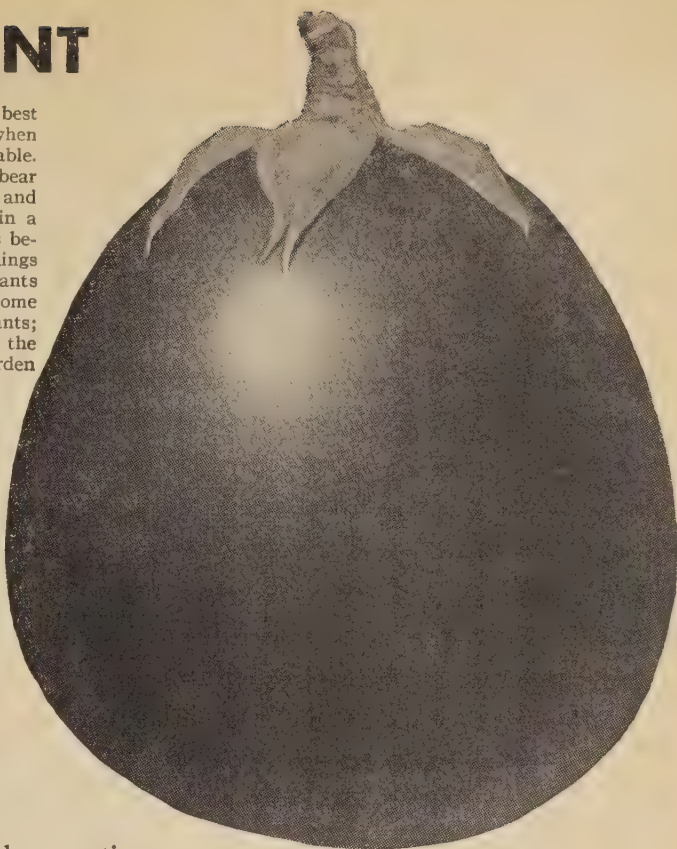

Burpee's EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or seed-pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 60 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

A pkt. will sow 50 ft. of row; 1 oz. 300 ft.

Burpee's Celtuce

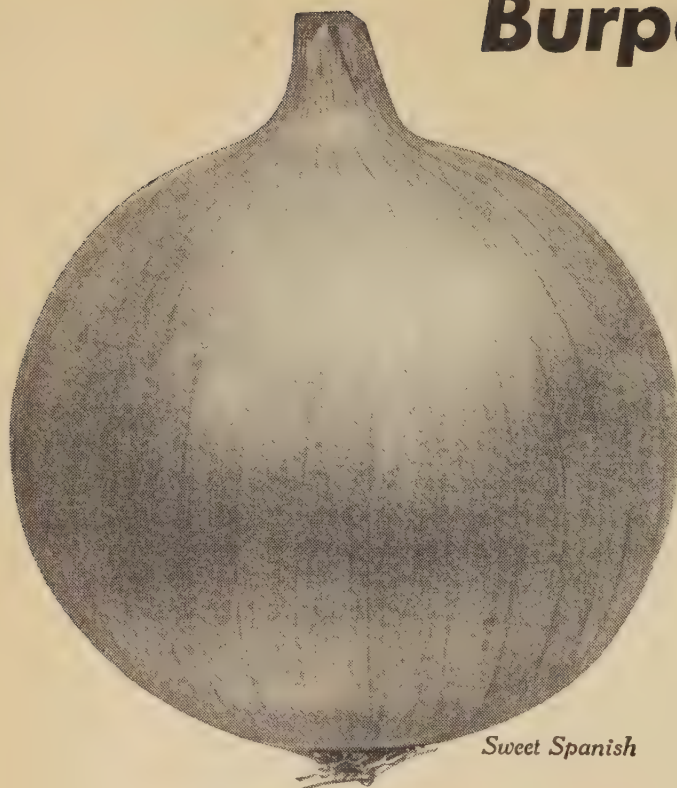

Burpee's CELTUCE Combines the uses and flavors of CELery and LetTUCE

5206 Burpee's Celtuce, introduced by us in 1942, belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtuce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtuce stalks have a pleasing, mild flavor suggestive of celery but different and milder. Truly delicious. Young leaves have four times the vitamin C content of head-lettuce leaves.

6072 Evergreen Long White Bunching

120 days. Does not form bulbs. Grown for its long, slender, silvery white stalks which are used for green bunching onions or scallions. They are produced in clusters of four to nine. For flavoring, you may use young plants 60 days after sowing seed. Perfectly hardy. Seeds sown in the spring or summer will provide mild, green scallions late in the fall or, if wintered over, very early the following spring. The young plants will need protection in sections where winters are severe.

How to Grow Onions

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 136 for How to Grow Onions from Sets; we offer both the white and yellow.

PEANUTS—Top ranking protein foods

Roasted peanuts, salted peanuts, peanut butter and peanut candies are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2½ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the row, or place them 16 to 18 in. apart in the row if planted in the hulls. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting.

FORDHOOK® SPINACH OR TAMPALA

VALUABLE "GREEN" THAT STANDS HOT WEATHER

Amaranthus gangeticus

First introduced in America by Burpee in 1944

5341 Burpee Fordhook® Spinach©

Within 6 to 8 weeks from sowing, Fordhook Spinach is ready to use when the entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. As a cooked, canned or quickly frozen green, Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, more delicious flavor, shrinks very little, holds its dark green color better and is easier to prepare. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor being suggestive of artichokes. This newly recognized green leafy vegetable has an unusually long period of usefulness in the summer garden, doing best when days are long. Seed of Fordhook Spinach, then, should not be sown until the ground has become warm.

Wrinkled-seeded peas, both early and main crop varieties, are favored by many for home and market growing, quick freezing and canning, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool. Burpeeana Early is strongly recommended for its yield and flavor; Burpee's Blue Bantam and Thos. Laxton for larger peas. For main crop, Fordhook Wonder is highly prized.

EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. Mammoth Melting Sugar Pea vines should be given support of string or brush to climb upon for best results.

5184 Mammoth Melting Sugar ☉

75 days. Well-known, productive and resistant to fusarium wilt. The fleshy, tender, 4 to 4½ in. pods are light green, sometimes twisted, broad and blunt-ended, stringless, sweet and delicious. Pods are often sliced for cooking. The dried seed is large and white. Most widely used variety for home gardens; grown for market in some sections. Vines grow 4 to 4½ ft. tall and produce a heavy crop.

Pkt. 20¢; ½ lb. 45¢; lb. 80¢; 2 lbs. \$1.40; 5 lbs. \$3.25

5183 Dwarf Gray Sugar

65 days. The earliest and dwarfest growing sugar pea. Pods 2½ to 3 in. long, light green, curved, sweet and tender. Vines grow 2 to 2½ ft. tall and are very prolific. Because of its dwarf habit, Gray Sugar is ideal for home gardens, especially where space is limited and seasons are short. Dried seed is small and mottled reddish gray.

How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports (wire, brush or string) for the tall-growing varieties to climb upon. A pkt. will sow 20 ft. of single row; 1 lb. 100 ft.

BURPEE HYBRID TOMATOES

and other Hybrid Vegetables are true first generation (F₁) hybrids—each seed is produced by carefully controlled crossing by hand of two distinct parent lines. This is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with greater yields and better quality.

Important—Please Read HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and out-yield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes have the ability to produce larger plants and higher yield they must be fed more than standard tomatoes. Therefore, to produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of planting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom or set their first fruit. Water during dry spells.

Each hybrid tomato seed is produced by hand pollination which requires a great deal of work and entails a heavy expense. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will repay you in better fruits and a bigger yield.

6125 Burpeeana Early ♂

Distinctly different extra early, true, first generation (F₁) hybrid tomato

58 days. Originated by Burpee in 1948 at Fordhook Farms, to offset the usual shortcomings of many of the open-pollinated early varieties. Fruits are of an attractive, deep globular shape, medium size, smooth, firm, rich scarlet, average 5 ozs. and are borne profusely in clusters of from five to eight.

Burpeeana Early has produced the highest early yield of all varieties of tomatoes wherever tested and continues to bear throughout the season. Especially worthwhile in Canada, New England States, Northern States (Nebraska, North Dakota, etc.) where other varieties are too late unless planted early. Quality is excellent; flavor is mild. Plants are of indeterminate growth, vigorous open habit and highly prolific.

Burpee's Jubilee Tomato ☉

6122 Jubilee, originated by Burpee in 1943, compares favorably with the best of the standard red varieties in shape, smoothness, quality, solidity and heavy yields. Fruits are bright golden orange, deep-globular, 2 1/2 to 3 1/4 in. across, 2 1/4 to 2 3/4 in. in depth, heavy and really delicious; the orange colored interior is modern, thick-walled, with rather small seed cells and relatively few seeds. Most attractive when sliced and makes delicious juice. Very high in vitamins A and C. Nice if served alone or with red fleshed varieties. Being of mild but definite flavor, they are preferred by many to the best red tomatoes. If you have not enjoyed the delicious flavor and good eating qualities of Burpee's Jubilee, be sure to grow it this year. Fruits ready to use in about 72 days.

How to Grow Tomatoes

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. Light, friable soil of medium fertility is best for starting the seed. Cover seed with 3/4 in. of fine soil or sand. Keep soil moist but not too wet and avoid excessive drying. If seed is sown in container, keep it in a warm place (65 to 70°). When seedlings are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past in rows 3 to 4 ft. apart each way, if to be grown untrained and unpruned; if supported on stakes, plants may be set 18 to 24 in. apart in the row, except hybrids, which should be spaced 2 to 2 1/2 ft. apart in the row. Disturb roots as little as possible when transplanting.

Where summers are long, seed of standard varieties may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. Sizes and weights mentioned in descriptions are for the general field-run of fruits; with special care they often do better than we state. A pkt. of standard tomato seeds will produce about 100 plants; 1 oz. 5000 to 6000.

EXPLANATION OF CERTIFIED TOMATO SEED

Seed listed as "Certified" is produced from crops that were inspected and certified as to freedom from seed borne disease by the Agricultural Department of the state in which they were grown. It is well worth the slight additional cost.

Large Pink Fruited Tomatoes

For years it has been customary to refer to the following varieties as pink fruited; the only difference between a red tomato and a pink tomato is the skin color. Red tomatoes

have a yellowish skin while the pink has a transparent skin. They are usually milder and more delicate in flavor than red fruited tomatoes; meat is fleshy, with few seeds.

5323 Burpee's Globe —Extra choice

80 days. Introduced by Burpee in 1936. All-America Silver Medal Winner. Uniform, medium to large, rich pinkish red, globe-shaped, smooth tomatoes in clusters of 6 to 10, interior is firm, meaty, and free from any core. Contains little or no acid; a shy seeder, the seed cavities being full of solid meat. Excellent for home and market where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking as well as greenhouse forcing.

5334 Ponderosa —Immense fruits

83 days. It is not unusual for the purplish pink, deep, somewhat flattened fruits to weigh 24 ozs. and more, though the average runs around 9 ozs. The seed cavities are remarkably small, which accounts for the solid, luscious flesh of a delightful mild flavor. Of fine quality, tasty and palatable. Essentially a home garden tomato although it finds ready sale on local markets and roadside stands.

Burpee PEPPERS

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow. Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling either fresh or dried.

6083 Burpee's Fordhook® ⊙

66 days. Introduced by Burpee in 1940 and named for Burpee's Fordhook Farms. Fruits are blocky, just the right size and shape for stuffing; 3 to 3½ in. in diameter and 3½ to 3¾ in. deep, nearly round in cross section, with 3 or 4 lobes, glossy dark green skin turning bright red when ripe. The flesh is tender, crisp and always sweet. An excellent, extremely productive, uniform, high quality sweet pepper for early market and home gardens.

Sow seed in a hotbed or indoors in shallow boxes, pots or seed-pans of rich soil; cover seed with ¼ in. of fine soil. Allow 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is passed. When the soil has become warm, set the young plants in the garden, 18 to 24 in. apart in rows 2 to 3 ft. apart. A pkt. will produce about 50 plants; 1 oz. 1500. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

5048 Burpee's Sunnybrook® ⊙—Sweet

Thin to stand 1 to 2 in. apart in the row. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft. New Zealand Spinach (Tetragonia expansa)

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Timpala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter? The number of days from sowing the seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this will vary according to locality where and the season when seed is sown.

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

Sow seed early in the spring in rows 18 in. apart. Thin the seedlings to stand 7 to 12 in. apart in the row. The following spring transplant to a permanent location. In gathering rhubarb stalks, select the larger ones growing on the outside of plant, grasp them firmly near the base and with a slight sideways twist, pull them from the crown. Being perennial, rhubarb should be planted at one end of the garden. A pkt. of seed will sow 10 ft. of row; oz. 75 ft.

Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

How to Grow Squash

Summer Squash. Sow seed after danger of frost has passed. Put 5 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 3 or 4 of the strongest plants remain in a group; running varieties allow 2 or 3 plants to a group. Pkt. will plant 8 to 10 groups; an oz. 30 to 40 groups. They may, like pumpkins, be planted among the corn.

Winter Squash. Sow seed in the same way as given above for the running varieties of summer squash; 4 seeds in a group is sufficient. A pkt. will plant 6 to 8 groups; 1 oz. 20 to 30 groups. All varieties of squash grow best if planted in a fertile, deep soil.

SQUASH for Summer Use or Winter Storage

6112 Burpee's Bush Table Queen

Originated by Burpee in 1948

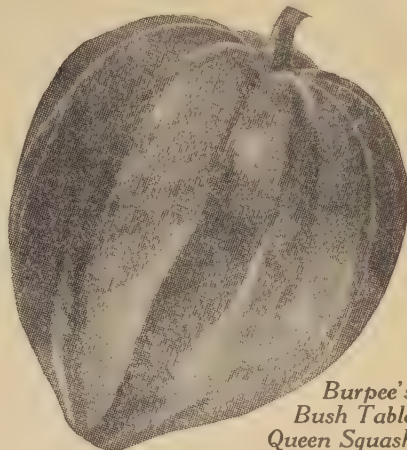

80 days. Fruits are similar in size, shape and color to those of the green fruited Table Queen vine variety, described below; the flesh is of better quality. Plants, however, are of semi-bush growth, produce just as many fruits per plant as the vine variety but take less space in the garden so may be planted closer. Excellent keeper. **Pkt. 25¢; oz. 60¢; 1/4 lb. \$1.60**

6108 Royal Acorn 82 days. A family-size Table Queen, with acorn-shaped fruits, 7 1/2 in. long, 6 in. across, dull dark green in color, turning dull orange after a period of storage. Flesh is fine flavored, up to 1 1/2 in. thick, dry and sweet, with baking quality as good as Table Queen. The keeping quality is excellent. Fruits may be used for boiling when immature, but for the best quality they should be allowed to fully develop. **Pkt. 20¢; oz. 50¢; 1/4 lb. \$1.50**

5057 Table Queen Vine 85 days. Also known as **Acorn** and **Des Moines**. Acorn-shaped, 5 in. long and 4 in. thick; deeply ribbed, dark green skin and thick orange flesh that cooks dry and sweet. Baked halves are popular for individual servings. Good keepers. **Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.25**

Uconn Discontinued. We recommend Burpee's Bush Table Queen.

Fruits may be used before the skin hardens, but the quality of the fine grained, sweet flesh will be better if they are allowed to form a hard shell; splendid for winter storage.

Green Leaf Vegetables for Winter Salads and Cooking

Greens and salads are highly beneficial to health as they are good sources of minerals and are also rich in vitamins. They are easily grown, very palatable, and may be had in a wide range of flavors from the piquant tang of endive to the mild taste of lettuce. Combinations of greens and salads are highly desirable and pleasing.

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

Lettuce, the brittle, tender leaves of the crisp and loosehead types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarolle; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Others include **Broccoli**, with its rich green, sprouting heads; **Brussels Sprouts**, whose flavor seems to improve after a light frost as does **Kale**; **Chives**, with its mild onion-like flavor; **Bunching Onions** for green scallions; **Leeks**, sweet flavored, thick stems; **Collards**, good boiling green with cabbage-like flavor;

Corn Salad, well known Lamb's Lettuce; **Mustard Greens**, splendid for salad or cooked like spinach; **Parsley**, a "must" in every garden, for garnishing or dried for use as flavoring; **Spinach**, frosty nights improve the color; **Swiss Chard**, popular for boiling greens as is **Spinach Beet**; **Turnip Greens**, use the Foliage variety, leaves have a mild flavor when cooked like spinach.

Remember, too, to provide for **Beets**, **Carrots**, **Turnips**, **Rutabagas** for winter use; they may be pitted in the garden or stored in a cool cellar. **Parsnips** and **Oyster Plant** may be left in the ground and dug whenever you can get into the soil during the winter or leave them for use in early spring.

Keep your garden working. The excellence of a garden consists not in its size, but in the yield and quality of its produce. See that it is well planned and well cared for. Even a small garden is an important addition to the family income and health.

Burpee's TURNIPS

At their best when growth is made during cool weather. Plant Extra Early Milan in the spring for their roots and the foliage types for their tops which are much used for "greens." Sow any variety in late summer for fall use or storing of the roots for use during the winter—Purple-Top White Globe being the most popular variety. Frost improves the flavor of foliage turnips.

How to Grow Turnips

Sow Milan and Foliage turnips in the spring as soon as the soil can be worked; space rows 12 to 15 in. apart. Thin seedlings to stand 2 to 4 in. apart in the row. For succession, make 2 or 3 sowings at two-week intervals. For fall and winter crop, sow any variety in rows or broadcast about 3 months before your first expected hard frost. A pkt. will plant about 50 ft. of row; an oz. 250 ft.

6121 Purple-Top White Globe ☉—Widely grown

WATERMELONS

Ice cold watermelon is a much welcomed treat during the hot summer days. Take your choice of round, oval, or long shaped melons and pink, red or golden yellow flesh. If you live in the North, plant the quickest maturing varieties (New Hampshire Midget, Burpee's Fordhook Early or Sunnybrook Hybrid).

If you have not been able to grow melons, because disease prevented non-resistant varieties from producing a crop, try Charleston Gray or Dixie Queen.

5255 Burpee's Fordhook® Early 83 days. Introduced by Burpee in 1890 and named for Burpee's Fordhook Farms. Fruits are large, slightly oval in shape, and about 25 lbs. in weight. Pkt. 20¢; oz. 50¢; ¼ lb. \$1.35

6245 Charleston Gray, Wilt Resistant 85 days. Pkt. 20¢; oz. 50¢; ¼ lb. \$1.35

How to Grow Watermelons

Plant seed after all danger of frost has passed and the soil has become thoroughly warm. Place 6 to 8 seeds in groups, allowing 2 to 3 in. between the seeds and space the groups 6 to 8 ft. apart each way. Cover seed with ½ in. of fine soil. Thin to 2 or 3 plants in each group after plants are well established. Rich, rather sandy soils produce the finest watermelons, but a well-drained loam is also suitable. BURPEE BULBS GROW

Tuberoze

Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs.

7261 Gloriosa Lily LILY ROTHSCHILDIANA

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Lily Rothschildiana is exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

This unique and interesting lily is a species discovered in East Africa. Early records show it was grown on the estate of the Hon. Walter Rothschild of England, for whom it was named. \$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

Burpee's DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we have created. Whether you select the massive Formal or Informal Decorative, the lovely Cactus, Semi-Cactus or the small Pompon varieties, you will be delighted with the results.

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

Cultural directions are sent with every order for Dahlia roots. We supply **strong root divisions** from field-grown clumps which are guaranteed to produce satisfactory results or your money will be refunded. All roots are sent postpaid in continental U. S.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs.

Burpee's famous gladiolus are grown and admired wherever beautiful flowers are known. They make attractive displays in the garden, planted either in beds or in groups here and there in perennial or annual borders and are ideal for house decoration. If the spikes are cut when the bottom flower shows color, all the buds, clear to the top, will open. Gladiolus are easily grown in any good, well-drained soil. The gladiolus bulbs that we offer are large, 1½ in. and more across and will produce the largest flowers and the tallest spikes. All Burpee bulbs are guaranteed to bloom or your money back. We offer an extra choice selection of named varieties.

You may order 25 bulbs or more of the same variety at the 100 rate.

Cultural directions are printed on every bag containing the bulbs. See opposite page for other gladiolus varieties.

RHUBARB ROOTS

The succulent stems of rhubarb are an appetizing dessert, either stewed or in pies. Never use rhubarb leaves for food purposes. Space roots 3 to 4 ft. apart; cover the crown with 3 to 4 in. of soil. Planted in early spring, roots will furnish a moderate cutting of stalks the next spring; regular cuttings thereafter.

In gathering rhubarb stalks, select the larger ones growing on the outside of plant, grasp them firmly near the base and with a slight sideways twist, pull them from the crown. Red-stalked rhubarbs are sweeter and make a sauce that is more beautiful and more delicious than the usual commercial rhubarb. All varieties are prized for canning as well as freezing.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to

have a luxuriant lawn that will add so much to the beauty of your home? The Burpee leaflet, "L 20—How to Establish a Lawn," will be sent free upon your request. For new lawns, sow 1-lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre.

Judging the "White Marigold" Trials at Floradale Farms on July 20, 1955 are, left to right, David Burpee, Dr. V. T. Stoutemyer and Dr. Lyman E. Jackson

The Marigold TREASURE HUNT

In 1954 we offered \$10,000 for a white marigold, and we received 204 samples of seed. These were grown on our Floradale Farms in California, and the results were judged on July 20, 1955 by Dr. Lyman E. Jackson, Dean of the College of Agriculture, Pennsylvania State University; Dr. V. T. Stoutemyer, Chairman of the Department of Floriculture and Ornamental Horticulture, University of California; and David Burpee, and on August 19, 1955 by Dr. Leonard H. Pollard, Head of the Department of Horticulture, Utah State Agricultural College; Dr. Stoutemyer and David Burpee. It was the unanimous verdict of the judges that none of the seeds produced a pure white marigold, but they believe that a white marigold eventually will be found.

\$10,000 FOR A WHITE MARIGOLD

Burpee will pay you **\$10,000** if you are the first person who sends us seeds that grow the first White Marigold as big as Man-in-the-Moon Marigold and as white as Snowstorm Petunia. It must be understood that you will not give or sell White Marigold seeds to anyone else and that all seeds sent to us become the property of W. Atlee Burpee Co., with the exclusive rights to name, introduce, and sell, and no seeds can be returned.

In recent years we have made so much headway in getting marigolds nearer and nearer to white that we are confident a white marigold will appear somewhere soon—perhaps, as a mutation, in your garden this summer. If you find one, do not cut the flowers but let them go to seed and send about 100 seeds to us at Philadelphia 32, Pa., Clinton, Iowa, or Riverside, California. We will plant the Marigold seeds on our Floradale Farms, and the results will be judged by the President of the W. Atlee Burpee Co., and two other distinguished horticulturists. The decision of the majority of the judges will be final, and the results will be announced in our seed catalogs.

In this world-wide search for a Pure White Marigold, anyone, anywhere, may submit seeds except Burpee employees or their families. It is understood that all seeds submitted for trial are accepted by us only under the above conditions.
